

Animals including humans

What I should already know

- Humans are mammals

Key Vocabulary

The 5 Senses

Sight: When eyes are used to see things.
Smell: The nose is used to sense smells
Hear: Ears are used to hear sounds
Taste: The mouth and tongue are used to taste things
Touch: The skin senses when things touch it.

Brain

Our brain interprets the messages it receives from our senses, and figures out how to act based on that information

The different parts of the **body**.

Key facts.

My face is made up of different parts. The face has eyes, ears, a mouth and a nose. The human body has many different parts; like the head, legs, arms, back, feet, hands, knees, fingers and toes.

Our senses help us to understand the world around us and can warn us of danger. Our senses send messages to our brains. There are five main ways we can do this: through sight (with our eyes), touch (with our fingers), smell (with our nose), taste (with our tongue) and hearing (with our ears).
